Udemy Full-stack web development course - finished 55 hour long course for full stack web development

PROJECTS

[Omni Akademija](#) —

The ultimate place for self-improvement and spiritual renewal or awakening through guided and expert-led courses.

Made slicing for most of the pages (FAQ, Blog, Profile and Edit profile settings, Oasis and Landing page) as well as most of the animations visible on the site. Also, connected the entire page to the backend side.

[Async Handbook](#) —

Place for sharing company's experience and opening company's door to the world

Made slicing for all the pages and all the functionalities that are visible on the site.

[Async Careers page](#) —

A place to show open career positions

Made all the animations (all the sliders and sticky images) and most of the functionality on the site

Gitlab quality control helper —

Chrome extension made for easier and quicker quality control

The extension is used in conjunction with our task/time management tool. It's used for easier tag and time management which usually takes a lot of our time during creating MR (or PR) and time clocking.

Statispo —

A application intended for the simplification of general business services done and managed by freight forwarding companies

Connected Stripe payment throughout the page

[Personal portfolio website](#) —

Place where I share my experiences and project I've worked on

It's made in HTML, CSS and Javascript but new site in ReactJS is under construction
